

EC225 Rotor Blades have arrived in the blade shop.

In February 2019, Airbus Helicopters Inc.'s Blade Shop in Grand Prairie, Texas received blades to repair from Air Center Helicopters in Burlleson, Texas. Airbus Helicopters Inc. teamed up with Airbus Blade expert team manager Daniel Corbel out of POB. Corbel dispatched expert field technician Jerome Gorge to Dallas for three weeks to get Air Center Helicopters blades back in service. This was a great reduction in repair time for the customer. This venture was a collaboration between AHI tech support Ala Ramadan, AHI blade shop lead Jim Boswell, Maurice Sabourin and Jacob Williamson along with technicians Christopher Caruso, Jorge Lopez, Scott Connell, and Manager Jim Tully managed to move these monsters from the work shop to the bonding room without damaging anything or hurting anybody.

During this mission we also repaired 2 H225 Tail Rotor Blades. Again everything is bigger on the H225 than what we normally see on the smaller aircraft.

HELICOPTERS

This mission would have not been a success if it was not for team work between several departments and a valuable customer. So a special thanks goes out to the Air Center Helicopters team, Airbus POB team Daniel Corbel and Jerome Gorge, AHI technical support Ala Ramadan and the AHI blade shop team.
